State Maintenance on ViewMode Switcher

1. Add the following functions to your javascript:

```
// State Maintenance functions
function setCookie(c_name,value,expiredays){
var exdate=new Date();
exdate.setDate(exdate.getDate()+expiredays);
document.cookie=c_name+ "=" +escape(value)+
((expiredays==null) ? "" : ";expires="+exdate.toGMTString());
}

function getCookie(c_name){
if (document.cookie.length>0){
  c_start=document.cookie.indexOf(c_name + "=");
  if (c_start!=-1){
    c_start=c_start + c_name.length+1;
    c_end=document.cookie.indexOf(";",c_start);
    if (c_end==-1) c_end=document.cookie.length;
    return unescape(document.cookie.substring(c_start,c_end));
    }
  }
return "";
}

function checkViewMode(){
      var c = getCookie('viewmode');
      if(c=='' || c=='list'){
            $('#container').addClass('list');
            $('#vm_list').addClass('active');
      }
      else{
            $('#container').addClass('icon');
            $('#vm_icon').addClass('active');
      }
}
```

2. Add the highlighted line to the change function

```
// Change the layout based on clicked 'rel'
$('#container').removeAttr('class');
$('#container').addClass(r);
setCookie('viewmode',r,30);
```

3. Remove the *class="active"* from the control link with *rel="list"* and add the ids *vm_list* and *vm_icon* to the two <a> tags respectively.

```
<a rel="list" id="vm_list">List View</a>  |  <a
rel="icon" id="vm_icon">Icon View</a>
```

4. Add the following line to your document.ready region so this fires off onload:

```
// Check preset viewmode
checkViewMode();
```
